	Urgent	Not Urgent
Important	**Do - (Your MVP)** ● Algorithm to pull the current weather data from the OpenMateo API ● Input all my clothes into an organized JSON file (as text, for ex: red square neck top) ● Connect result from API call to a specific category of clothes based on temperate outside, and output 3 strings of text outfit options.	**Schedule - (For V2.0+)** ● Create a GUI for the program to output pictures of the outfits instead of plain text. ● Suggest potential new hairstyles based on the outfit outputted. ● Add in a feature for event-specific outfit recommendations
Not Important	**Delegate - (Use a library)** ● For current weather data, use OpenMateo API	**Delete - (Cut it)** ● Recommend clothes to buy based on patterns of what I wear ● Recommend clothes to donate based on patterns of what I don't wear ● Feature to automatically update JSON file based on what's in the laundry and what's not.
